Astronauts work incredibly hard, putting in long hours in unnatural, difficult conditions. But sometimes they get pushed too hard, and reach a breaking point. This is the story of Skylab 4, the astronaut crew that **kicked off** the holidays with a mutiny.

Line The mission launched on November 16, 1973. The crew of Skylab 4—Gerald Carr, William Pogue and
5 Edward Gibson—were all space-rookies at the start of their 84 days in orbit. Like their predecessors on Skylab, the bulk of their time was devoted to scientific experiments including observations of comet Kohutek and the first recording of the birth of a solar flare. But unlike previous crews, they fell behind schedule and got into quarrels with Mission Control.

10 The astronauts claimed NASA was demanding too much. NASA countered that the rookie crew should be working through meals and scheduled breaks to catch up. The astronauts requested time off. Ground Control was horrified and confused, citing the request for time off as signs of lethargy and depression.

Commander Carr attempted to reason with Mission Control, pointing out, "On the ground, I don't think we would be expected to work a 16-hour day for 85 days, and so I really don't see why we should
15 even try to do it up here." Meanwhile, Pogue tried to explain that by over-scheduling, NASA was setting the astronauts up for failure: "You have to put away equipment, you have to debrief, and then you have to move from one position to another, and you have to look and see what's coming up, and we're just being driven to the wall! There's not enough consideration given for moving from one point in the spacecraft to another and allowing for transition from one experiment to another. When we oppressed bodily from one
20 point in the spacecraft to another with no time for mental preparation, let alone getting the experiment ready, there's no way we can do a professional job!"

Six weeks into the mission, **the crew broke**. They declared an unscheduled day off, turned off their radios, and took the day to shower, stare out the windows, and relax. After the strike, Commander Carr renegotiated a work-schedule with Ground Control. The crew was to be left alone during meals, and no strenuous work would be scheduled after 8 pm. Routine chores would be placed on a list for the
25 astronauts to pick off at their convenience instead of on a rigid schedule. The truce had consequences: with more rest and higher morale, the astronauts were more productive. But they also were no longer trusted, and once the mission ended, none of the trio ever flew again.

This wasn't the only space-mutiny: the crew of Apollo 7 went on strike after all three caught colds in
30 orbit and a Mir crew refused to complete a sixth spacewalk inside of two months to complete non-essential repairs. Considering how independent astronauts are, how rough the space environment is, and how much bureaucrats want to squeeze out of every expensive mission, it's a wonder mutinies have been so rare.

11. What best replaces "kicked off" in line 3?
A. ignored
B. celebrated
C. started
D. welcomed
12. According to paragraph 3, what was NOT true about the disagreement between NASA and the astronauts?
A. NASA assumed the crew lacked energy and was depressed.
B. Ground Control wanted the crew to go without meals.
C. The crew considered their workload to be way too high.
D. Ground Control was puzzled and shocked by the astronauts.
13. According to the passage, which of the following is NOT said about Gerald Carr?
A. He demanded that the crew took a one-day vacation.
B. His Skylab mission was his first time in space.
C. His Skylab mission was his last time in space.
D. He was the commander of the Skylab 4 crew.
14. Which of the following best paraphrases Carr's argument in paragraph 4?
A. It's unreasonable that someone on Earth would work so hard so long; how much more, then, to do it in orbit.
B. We are professionals and should not be expected to work with only 8 hours off a day for nearly three months.
C. Because the expense of putting people into space is so expensive, we should make sure do it correctly.
D. We are being treated unfairly just because we are up here in space and not down on the ground like you guys.
15. According to paragraph 4, what is NOT an argument that Mr. Pogue offered?
A. Moving between areas on the spacecraft was complicated.
B. The weightlessness of space made it easy to bang into walls.
C. The crew was not mentally prepared to make transitions.
D. Professionalism was made difficult in such working conditions.
16. In line 22, what does the author mean by "the crew broke"?
A. The crew resigned from their jobs.
B. The crew departed from the spacecraft.
C. The crew's frustration became complete.
D. The crew became completely independent.
17. According to paragraph 5, what can be inferred as to why the trio never flew again?
A. They realized they were not good astronauts.
B. The three did not like working for NASA.
C. NASA lost their confidence in the three men.
D. Carr, Pogue, and Gibson did not make a good team.
18. According to the last paragraph, what is the author's opinion of the frequency of astronaut mutinies?
A. He would expect there to be more.
B. He is thankful there are so few.
C. External factors keep them rare.
D. He wants there to be more mutinies.
19. What does the tone of the article indicate?
A. The author is amused that there was a mutiny in space.
B. The author is slightly critical of the Skylab astronauts.
C. The author is slightly sympathetic to the astronauts.
D. The author is requiring better working environments.
20. How has the author organized the article?
A. a collection of anecdotes surrounding an event
B. a real-world example to advocate for change
C. an exploration of a problem and discussing solutions
D. a chronological progression of a historical event
