III. Read the following passage carefully, and then choose the best answer.

Galileo Galilei, one of the first modern scientists, was born in Pisa, Italy, in 1564. About twenty years later he attended the University of Pisa. At first he studied philosophy, but later he studied mathematics and astronomy. He was interested in the way the earth and other planets move around the sun. He made the telescope, which made far-away things look larger and easier to examine. He also started the new way of working in science. Before Galileo; scientists did not do experiments. They just guessed about how something happened. Galileo was different. He did not just make guesses. He did experiments and watched to see what happened.

Galileo was famous for his study of how things fall. He was the first person to do experiments about this problem. Before, people thought that heavy things always fell faster than light things. He found out that this was not true. He took a heavy ball and a light ball and he dropped them both from a high place. They fell at the same speed. This meant that weight is not important. This is the law of falling bodies. It is an important law for understanding our world.

The life of the scientist was not always easy in the 1500s. For example, Galileo got into trouble because of his scientific ideas. His ideas were not the same as the religious ideas at the time. Many religious people did not agree with him. During his whole life he had to worry about this. He even went to prison for a while. But no one could stop him from thinking. He continued to look for scientific answers to his questions about the world.

V. Read the passage and choose A, B, C, or D for each of the following questions.

A recent investigation by scientists at the U.S. Geological Survey shows that strange animal behaviour might help predict future earthquakes. Investigators found such occurrences in a tenkilometre radius of the epicenter of a fairly recent quake. Some birds screeched and flew about wildly; dogs yelped and ran around uncontrollably.

Scientists believe that animals can perceive these environmental changes early as several days

before the mishap. In 1976 after observing animal behaviour, the Chinese were able to predict

devastating quake. Although hundreds of thousands of people were killed, the government was able to evacuate millions of other people and thus keep the death toll at a lower level.

1. What prediction may be made by observing animal behaviour?

- A. an impending earthquake
- B. the number of people who will die
- C. the ten-kilometre radius of the epicentre
- D. environmental changes

2. Why can animals perceive these changes when humans cannot?

- A. Animals are smarter than humans.
- B. Animals have certain instincts that humans don't possess.
- C. By running around the house, they can feel the vibrations.

D. Humans don't know where to look.

3. Which of the following is NOT true?

A. Some animals may be able to sense an approaching earthquake.

B. By observing animal behaviour scientists perhaps can predict earthquakes.

C. The Chinese have successfully predicted an earthquake and saved many lives.

D. All birds and dogs in a ten-kilometre radius of the epicentre went wild before the earthquake.

4. In this passage, the word "evacuate " mostly means.....

A. remove

B. exile

C. destroy

D. emaciate

5. If scientists can accurately predict earthquake, there will be.....

A. fewer animals going crazy.
